

LetterSheets — HR Module User Manual

A simple, task-oriented guide to the Human Resources module. Currency is Philippine Peso (₱) and statutory defaults follow Philippine rules (SSS, PhilHealth, Pag-IBIG, BIR).

Getting started

Open the app and sign in, then go to the **HR** module. The HR module has these sections (tabs):

Section	What it's for
Overview	Dashboard summary of your workforce
Employees	The staff roster and each person's record
Departments	Company departments
Positions	Job titles / roles
Schedules	Work-hour schedules (shifts)
Attendance	Daily clock in / clock out
Leave	Leave requests and approvals
Onboarding	New-hire checklists
Payroll	Pay runs and payslips
Benefits	Benefit plans (HMO, allowances, etc.)
Loans	Employee loans
Compliance	Government contributions and filings

Recommended setup order

If you're starting fresh, set things up in this order so later steps have the data they need:

1. **Departments** →
2. **Positions** →
3. **Schedules** →
4. **Compliance** (pick your country template) →
5. **Benefits** and **Loan Types** →
6. **Employees** (now you can assign department, position, salary, benefits) →
7. Day-to-day: **Attendance**, **Leave**, **Onboarding**, **Payroll**.

A note on privacy (important)

Sensitive employee data — **salary, email, phone, birth date, address, government IDs, and bank details** — is **encrypted in your browser** before it is saved. The server never sees these in plain text. This is why:

- You must be **logged in** for the app to read/show these fields (it decrypts them locally). If you see `[decrypt error]`, log out and log back in.
- **Payroll is calculated on your computer**, not the server, because it needs to read salaries.

Overview (dashboard)

The landing page. Read-only — it summarizes everything:

- Top tiles: **Total Employees, Present Today, On Leave, Monthly Payroll.**
- Cards for Recent Employees, Departments, Compliance Status, Pending Leave, Onboarding progress, recent Payroll runs, and Active Loans.
- Use the **View all** →, **Manage** →, and **Details** → links to jump into any section.

Departments

Group your company into departments.

Add a department 1. Go to **Departments** → click **Add Department**. 2. Enter a **Department Name** (required) and pick a **color**. 3. Optionally add a **Description**. 4. Click **Add Department**.

View / edit — click a department row. The panel has a **Details** tab and an **Employees** tab listing its members. Use **Edit** to change it or **Delete** to remove it.

Search with the **Search departments...** box.

Positions

Define job titles and their pay rules.

Add a position 1. Go to **Positions** → click **Add Position**. 2. Enter a **Position Title** (required). 3. Optionally set the **Department**, **Level** (Entry → C-Level), an **OT Multiplier** (e.g. `1.25`), and a **Description**. 4. Click **Add Position**.

OT Rate: leave it at `0` to use the company default (1.25×). The list shows the multiplier like `1.25×`.

Filter by department with the **All Departments** dropdown; click a position to see who holds it.

Schedules (work hours)

Define shifts and the numbers payroll uses.

Add a schedule 1. Go to **Schedules** → click **Add Schedule**. 2. **Details tab**: enter a **Schedule Name** (required), pick a **Type** (Fixed / Flexible / Rotating), and set: - **Hours / Day** (default 8) - **Working Days / Month** (default 22) — used as $\text{daily rate} = \text{monthly salary} \div \text{this number}$ - **Night Diff %** (e.g. **0.10** for a 10% premium on hours worked 10 PM–6 AM) - Tick **Company Default** to make this the fallback schedule. 3. **Days tab**: for each weekday set **start time**, **end time**, and **break minutes**, or toggle a day to **Rest**. (Default: Mon–Fri 08:00–17:00 with a 60-min break; Sat/Sun rest.) 4. **Assignments tab**: attach the schedule to whole **Departments** or **Positions** so their staff use it automatically (individual employees can still be overridden). 5. Click **Add Schedule**.

Employees

The heart of the module — the staff roster and each person's full record.

Add an employee 1. Go to **Employees** → click **Add Employee**. 2. Fill in the tabs (required fields marked below): - **Personal**: First Name, Last Name, Middle Name, Email, Phone (with country code), Date of Birth, Address. - **Employment**: Department, Position, Start Date, Type (Regular / Probationary / Contractual / Part-time), Status (Active / On Leave / Suspended / Terminated). - **Compensation**: Basic Monthly Salary (₱), and toggle which company benefits they're enrolled in. - **Government IDs**: SSS, PhilHealth, Pag-IBIG, TIN. - **Bank**: Bank Name, Account Number. 3. Click **Save***.

Fields in **Compensation**, **Government IDs**, and **Bank** are marked **Encrypted** — they're protected in your browser before saving.

View / edit — click any employee. Use **Edit** to change details or **Delete** to remove them. Search with **Search employees...** (matches name, department, or position).

Giving an employee a login account (optional) - In the employee panel you can **create a login account** (username + an auto-generated temporary password — use **Generate**), or link to an existing user. - The **Permissions** tab controls which modules/functions that person can access. (Self-service access is always included.) - Use **reset password** to issue a new temporary password. Passwords are hashed and can never be displayed.

Attendance

Track daily clock in / clock out. (Regular employees can only view their own record.)

Add / edit a record 1. Go to **Attendance**. Pick the **date** at the top; optionally filter by **department** or search a name. 2. Click **Add Record** (admins) — pick the **Employee** and set a **Status** (required). 3. Optionally enter **Clock In**, **Clock Out**, and **Remarks**. Click **Add Record**. 4. Click an existing row to **Edit** or **Delete** it.

Statuses: Present, Absent, Late, Half Day, On Leave, Holiday, Rest Day. These drive payroll (see below).

Leave

File and approve time off.

File a request 1. Go to **Leave** → **New Request**. 2. Choose the **Employee** (admins), a **Leave Type**, and the **Start / End Date**. **Days** auto-calculates (you can adjust, minimum 0.5). Add a **Reason**. 3. Click **Submit Request**. It starts as **Pending**.

Approve / reject (admins) - Use the **Pending** tab. On a pending row, click the **check** to approve or the **X** to reject (you can add a rejection note). - Filter with the **All / Pending / Approved / Rejected** tabs.

Leave types: Vacation, Sick, Emergency, Maternity, Paternity, Bereavement, Unpaid.

Onboarding

A drag-and-drop board for getting new hires set up.

First, create a template 1. Go to **Onboarding** → **Templates** → **New Template**. 2. Name it (e.g. *Pre-Employment Documents*), then add checklist items (e.g. *Birth Certificate*, *NBI Clearance*, *Contract Signed*). Mark items **Required** as needed. Save. 3. Each template becomes a **column** on the board.

Start onboarding a hire 1. On the board click **New Onboarding**, pick the **Employee**, set a **Target Completion Date**, and click **Start Onboarding**. 2. **Drag** the person's card between columns to move them through stages. 3. Click a card to open the **checklist**: tick items as they're completed, or add custom items. Progress and an **Overdue** flag show automatically; reaching 100% marks them **Completed**.

Payroll

Create pay runs, compute pay, and approve. (Employees see only their finished payslips.)

One-time setup 1. Go to **Payroll** → **Settings**. 2. Set the **Pay Schedule** (Semi-Monthly or Monthly), **Working Days/Month**, **Hours/Day**, **OT Multiplier**, and **Night Diff %**. 3. Toggle which deductions apply:

SSS, PhilHealth, Pag-IBIG (HDMF), Withholding Tax. Click **Save Settings**.

Run payroll 1. Click **New Run**, set the **Period Start / End** (auto-filled from your schedule), and click **Create Run**. It starts as **Draft**. 2. Open the run and click ⚡ **Compute Payroll**. The app reads attendance for the period and each employee's (encrypted) salary and calculates: - **Basic pay** from days worked (Present/Late = 1 day, Half Day = 0.5; Absent, On Leave, Holiday, and Rest Day are not paid), - **Overtime, statutory deductions** (SSS, PhilHealth, Pag-IBIG, BIR tax), and any **active loan** repayment. 3. Review the per-employee table and totals (**Gross, Deductions, Net**). 4. Click **Approve** when correct. (Use **Delete** to discard a draft.)

Why it can be slow: payroll math runs in your browser because it must decrypt salaries locally. Stay logged in and keep the tab open while it computes.

Statutory tables use Philippine 2024 figures (SSS schedule, PhilHealth 5%, Pag-IBIG, BIR TRAIN graduated tax). Verify against the latest official tables before relying on them for filing.

Benefits

Set up the benefit plans employees can enroll in.

Add a benefit 1. Go to **Benefits** → **Add Benefit**. 2. Set the **Benefit Type** (HMO, Life, Dental, Rice Subsidy, Transportation, etc.), **Name**, **Provider** (e.g. Maxicare), **Status**, **Frequency**, and a **Coverage Description**. 3. Under **Tiers & Costs**, add at least one tier with an **Employer ₱** and **Employee ₱** share (use **Add Tier** for more). 4. Save.

Each benefit card shows a cost range and how many employees are **Enrolled**. Open a benefit's **Employees** tab to see who is / isn't enrolled. (Enrollment itself is toggled per person on the employee's **Compensation** tab.)

Loans

Manage employee loans and repayments.

Set up loan types first 1. Go to **Loans** → **Loan Types** → **New Type**. 2. Set **Name**, **Max Amount**, **Interest Rate (%)**, **Max Term (months)**, and whether it **Requires Approval**. Save.

Create a loan 1. Click **New Loan**, pick the **Employee** and **Loan Type**, enter the **Amount** and **Term (months)**. A box shows the **Interest**, **Total Payable**, and **Monthly Payment**. 2. Click **Submit Application**. It starts as **Pending**.

Approve and manage - On a pending loan, click the **check** to approve (this activates it and sets the due date) or **X** to reject. - Open an **Active** loan to **Record Payment** (Manual, Payroll Deduction, or Lump Sum) and watch the balance and progress bar update. Approved active loans are also auto-deducted during payroll. - **Statuses:** Pending, Approved, Active, Paid, Rejected, Cancelled.

Compliance

Track government contributions and filings.

First-time setup 1. Go to **Compliance** → choose your **country template**. For the **Philippines** this preloads **SSS, PhilHealth, Pag-IBIG, and BIR**. (Templates also exist for US, Singapore, UK, India, or start Custom/empty.) 2. Click **Use {Country} Template** (or start empty).

Manage an agency 1. Click an agency card, then **Edit** (or **Add Agency** for a new one). 2. Set the **Short Name** (required, e.g. **SSS**), **Full Name**, **Frequency**, **Due Date**, **Last Filed**, and **Status** (Remitted / Filed / Due / Overdue / Not Filed). 3. Under **Contribution Fields**, add the values you track (Currency / Percentage / Text) — e.g. Employer Share, Employee Share, Withholding Tax. 4. Save.

Cards are color-coded by status so you can see at a glance what's **Due** or **Overdue**.

Roles at a glance

- **Admin / HR users** get the full experience: add, edit, approve, run payroll, and manage everyone.
 - **Employee-role users** see a self-service view — only their own attendance, leave, loans, and payslips, without admin controls.
-

Quick tips

- **Stay logged in** to view salaries, IDs, and to run payroll — those need your browser's decryption key.
- Set up **Departments and Positions before Employees** so the dropdowns are populated.
- Set **Payroll Settings** and **Attendance** before computing a run — payroll reads both.
- All amounts are in **Philippine Peso (₱)**; double-check statutory tables against current official rates before filing.
